

HHOG II "Hammer EX"

Extreme performance Flashback Arrestor

See the Demo Video: http://www.youtube.com/watch?v=r_soBXSgyDs

We have updated the design of the original HHOG II Hammer to greatly reduce the flow restriction found in these types of flashback arrestors. Flow restriction has been reduced by over 50%, which makes it great for medium output Hydroxy Generators! Not only that, we have lowered the moisture vulnerability from the previous version. This little device is great for point of exit flashback protection. This is your first line of defense. A bubbler is necessary to remove electrolyte condensate and moisture from the Hydroxy gas. Excessive moisture should not be allowed to pass through any Flashback Arrestor. It is highly recommended that you install an inline air dryer on the line going into the HHOG II Hammer EX.

FEATURES:

- Full color instructions: <http://www.hhoglabs.com/images/HHOG2HammerEX.pdf>
- Triple chamber design with exclusive forward "Flame Front Quenching Chamber"
 - Less flow restriction than ANY other design of its size out there.
- Solid-state construction with non-compressed sintering to combat flow restriction.
 - Easy installation. "Plug and Play"
 - Interchangeable barbs included: 1/4, 5/16 and 3/8!
- Our own unique, tested design. **Not a Bronze Wool copy.**

Shipping Weight:
5 oz each
